SongTrackr

Morning-6-LP

The Team

Dylan McCoy

Diana Shao

Kevin Chen

Jerry Liu

Matthew Golla

Ryuichi Yanagi

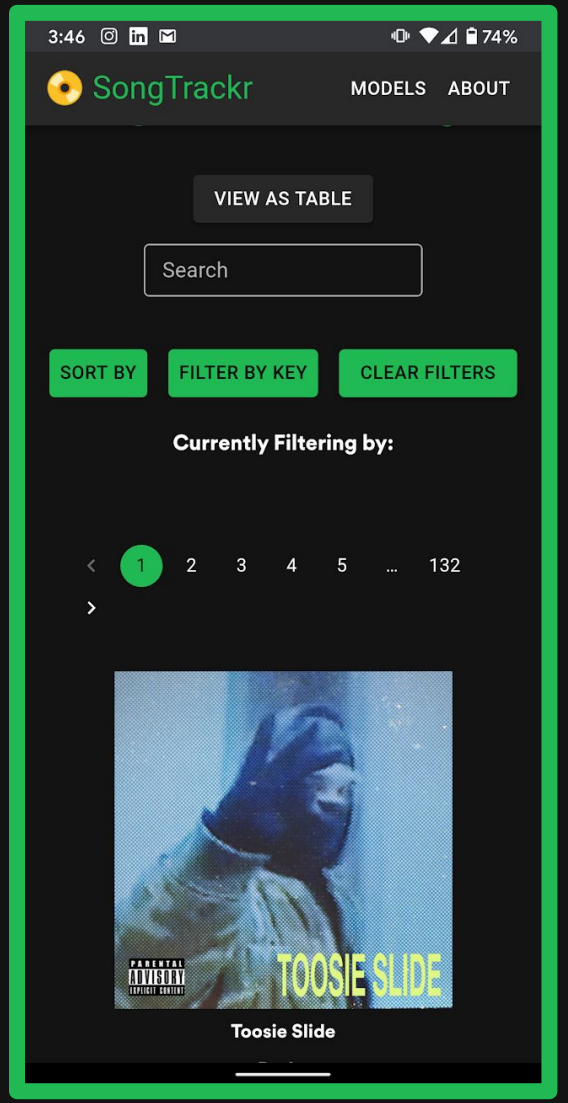
What is SongTrackr?

Demo!

How did we do?

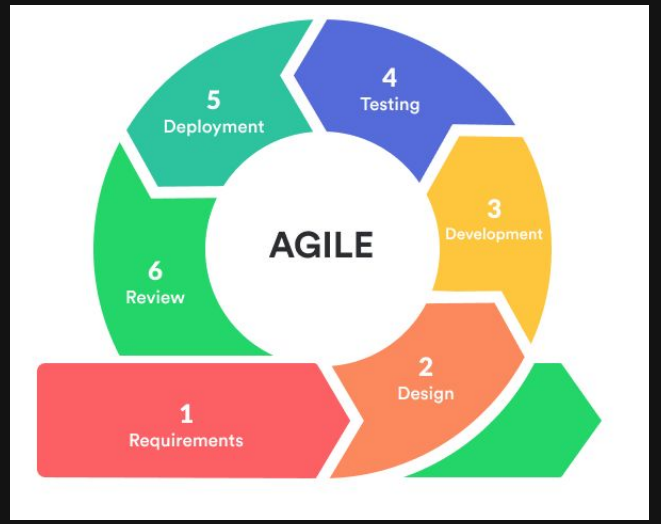
What Went Well

- **Responsiveness**
  - *local caching*
  - *lazy loading*
- **Mobile friendly site**
- **Effective teamwork**
- **Receptive to feedback**



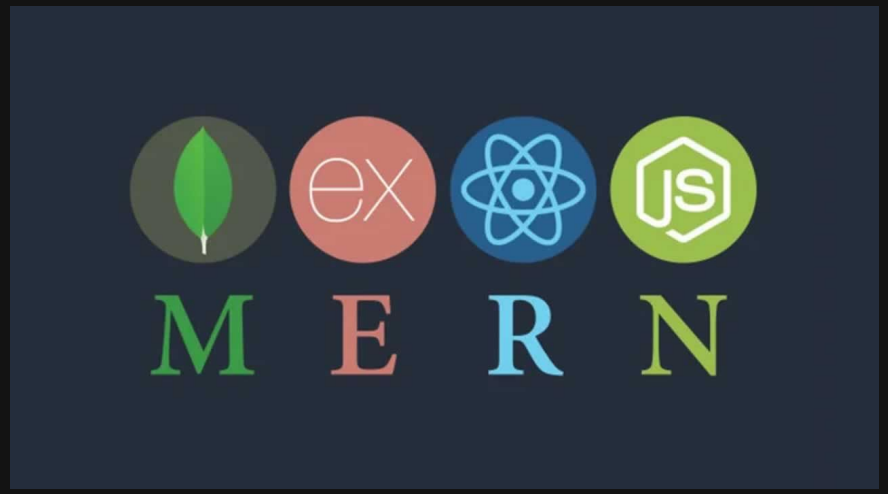
What We Could Do Better

- **Extended functionality**
  - *more types of charts*
  - *more useful data*
  - *explicit song filtering*
- **Better use of Scrum/Agile methods**
- **Start with good design patterns**



What We Learned

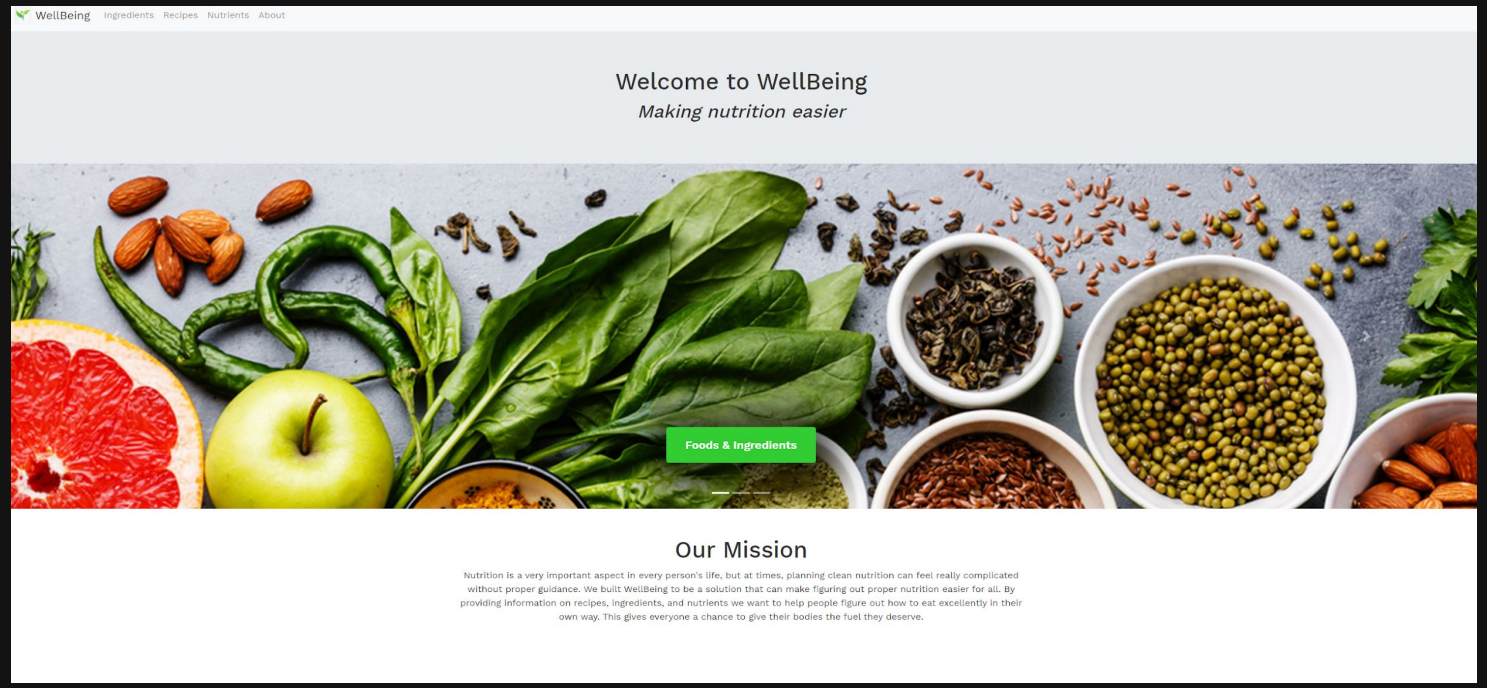
- New technologies
  - *React, MongoDB, RestFUL API*
- Importance of good design
  - *Starting with requirements*
  - *Design patterns*
  - *Code smells & refactoring*
- Working remotely with a team



Developer Critique

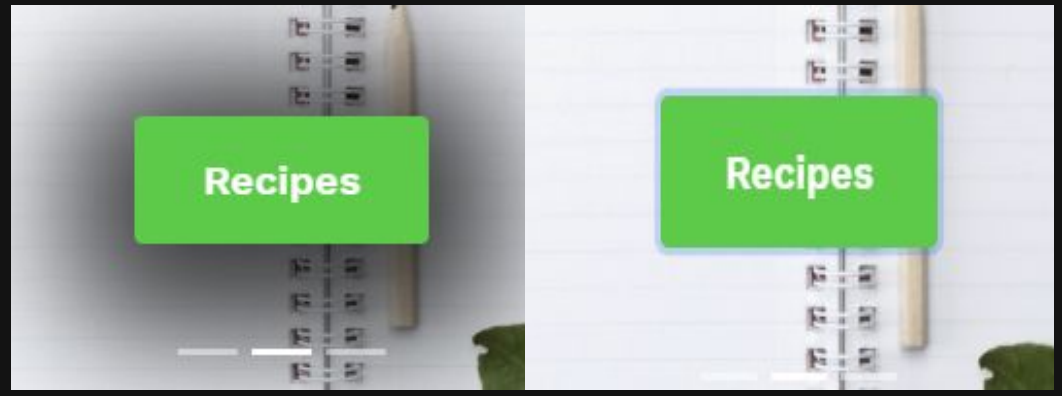
What They Did Well

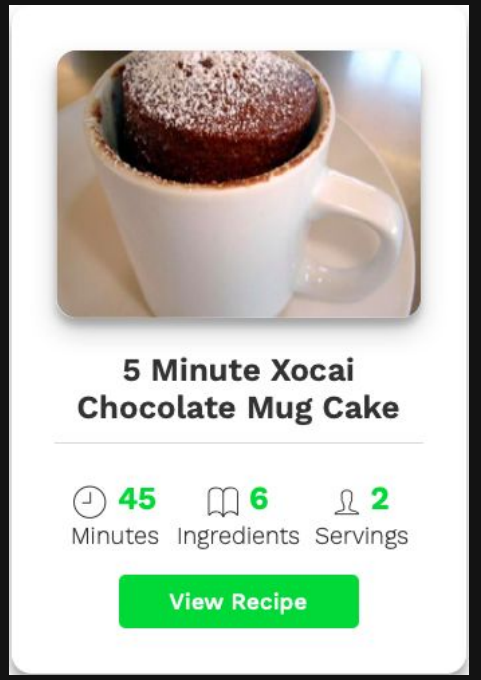
- **Beautiful landing page**
- **Quick Loading**
- **Model instances show useful information**



What We Learned

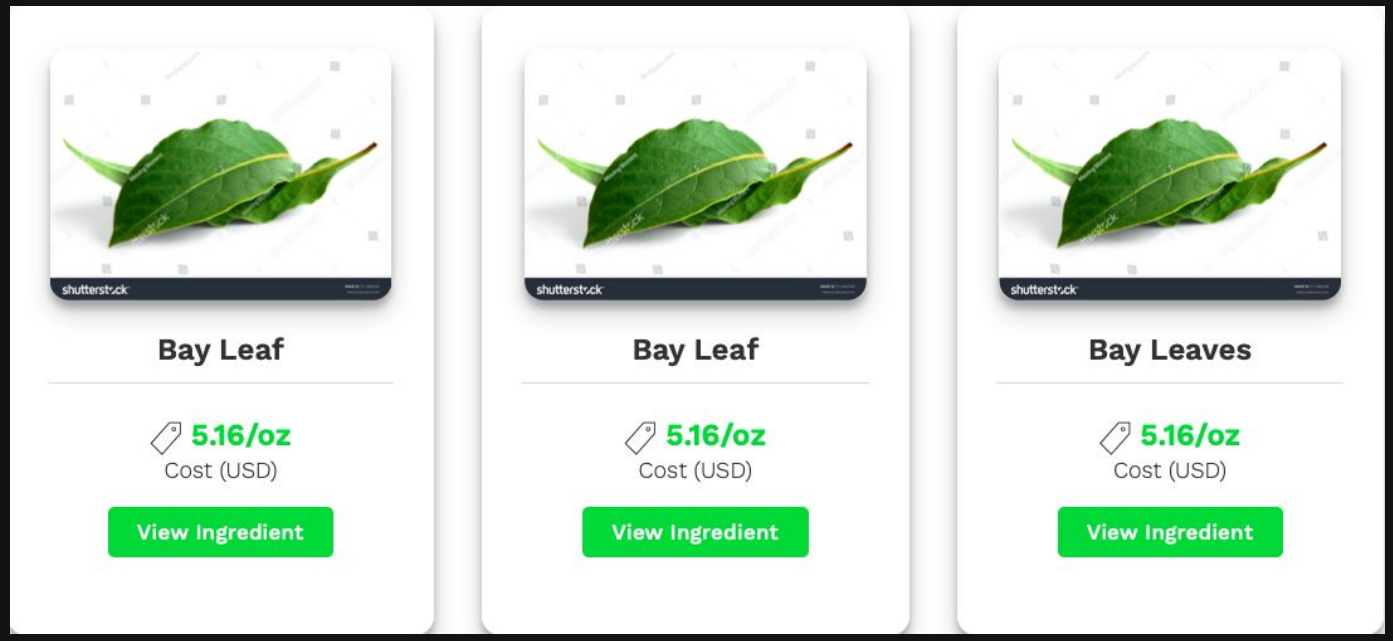
- The importance of eye-catching landing page images
- Adding small details around the site makes a big difference





What They Could Do Better

- **Some ingredients/nutrients are missing links**
- **Filter and sort can’t be combined**
- **Duplicate Instances (e.g. Bay Leaf and Bay Leaves)**



What Puzzled Us

- What is the meaning of the healthy score?
  - *Bean side dish has a score of 1 while oreo muffin has a score of 3*
- Confusion regarding some of the information on instance page
  - *What do the badges mean?*
- How could we use the nutrition info to create healthy diets?

- HealthScore: 1.0/100

- HealthScore: 3.0/100

Thank you!
